## ENGLISH: Private Tubes – User Manual

Congratulations! You've made the right choice in intimate satisfaction! Your new Private masturbator offers unlimited pleasure, right in the palm of your hand. Let this premium masturbator take you to new heights of ecstasy and enjoy its realistic appeal by following the instructions below. If you handle it correctly, it will handle your manhood with lustful stimulation!

### **Getting Started in 3 Easy Steps**

**Step 1:** Remove the inner plastic tube before first use

Your Private masturbator contains a small plastic tube inserted in the inner sleeve. This tube has protected your product during production, storage, and transport, and needs to be removed before you can enjoy your purchase. Simply pull out the tube, discard, and you're ready for Step 2.

**Step 2:** Clean and warm up your Private masturbator

Always clean and warm up the inner sleeve of your Private masturbator before usage. Not just the first time, but every time. Yes, you can use it without heating up the texture, but who likes a cold pussy, mouth, or ass? Exactly. Things simply feel better when they're hot and sensual! Cleaning and heating your sleeve before usage is actually really easy. Don't worry about electrical warming rods or other gimmicks. All you need to do is remove the inner sleeve from the masturbator case and immerse it in warm water.

Never use boiling water or the microwave to heat up the material, as too warm temperatures may damage the sleeve. You can use any water basin, such as the sink or a bowl. Just make sure the sleeve is completely submerged under warm water. Let it warm up for around 5 to 10 minutes. Take it out, let it air dry or wipe it dry with a clean cloth, and move on to Step 3.

**Step 3:** Lube it up!

When your Private tube is at the desired temperature, adding a water-based lube is a guaranteed way to smoothen your intimate adventures. As the inner sleeve of your product lacks natural lubrication, adding a quality glide formula is essential to get your masturbator nice and wet.

To help you get started, we've included a sachet of premium S8 Original Lubricant. This all-natural choice in lubes is safe to use with the sleeve's toy material and offers long-lasting glide, heightening stimulation and intensifying your experience.

Simply insert as much lubricant as you want into the sleeve. Only use water-based formulas, as these will not damage the texture of the sleeve, so you can be as generous as you want. When you've applied the water-based lubricant, slowly slide your manhood into the canal to ensure every part, including your manhood, is lubed up and ready to go. By penetrating the sleeve slowly, and turning it sideways, you're able to 'coat' every sensational bump, ridge, and rib with lube.

### **How to Use Your Private Masturbator**

#### **Movement**

When you're ready to start your pleasurable Private adventure, penetrate your warm, lubed-up masturbator and start moving the design up and down. The inner texture is designed to thrill you with realistic stimulation, whilst the sexy opening embraces your manhood tightly.

#### **Adjusting suction**

A fantastic feature of your Private masturbator is that you're able to control its suction power and pressure. If you feel the interior suction/vacuum is too strong or intense, or too weak, twist the cap at the end to adjust. You also have the option to change intensity during usage, offering mind-blowing diversity in your masturbating fun with a simple twist of the cap. Get experimenting, find your perfect suction, and get satisfied!

### **How To Clean Your Private Masturbator**

When you've finished your tantalizing adventure with the Private masturbator, it's important you give the product a proper clean to keep it in optimum condition.

Cleaning a Private product is done in 3 easy steps:

#### **Step 1:** Washing

After each use, rinse your Private masturbator with water. Simply remove the textured sleeve and let warm water (never boiling!) run through the interior canal until you've rinsed out all lube, cum, and residue. This should only take a few minutes. Do not use soap, or detergent, as these may damage the texture of the sleeve. Simply water will do the trick for a quick clean.

**Tip:** We also recommend doing a thorough clean about once a month. Put some isopropyl alcohol on a clean cloth and wipe down the interior, and exterior, of the sleeve to disinfect it properly.

#### **Step 2:** Drying

When you've finished washing your Private masturbator, shake off any excess water and let your product air-dry in a well-ventilated area. If you don't have time to air-dry your product, or maybe want to be discreet any quickly need to store it away, you can also pad it dry using a clean cloth or towel. Slide your cloth through the opening of the interior canal until the sleeve is completely dry on the inside.

#### **Step 3:** Renewing Powder (optional)

To keep your sensational Private masturbator in optimum condition, it is recommended to use some renewal powder to keep the material it supple and soft. Lightly dust some of the powder on the interior and exterior of the sleeve, and let it work its magic.

Always rinse your Private masturbator in warm water before using it again, as this not only helps heat up the sleeve but also gets rids of any renewing powder still coating the surface.

Treat your Private masturbator right, and it will treat you right. Get ready, get experimenting, and get pleasurable with this mind-blowing choice in intimate fun. Enjoy your Private adventures!
